

BREAKFAST ON THE GRASS

SPA, PROGRAM AND SPACE SOLUTION

The design comes from the essence of the location – the thermal water. The spa has been there for a while now and it gives us the experience of warm, healing water. Hot springs can be either in the city or in the nature. Coming from our current life style and the real needs of a modern man, the user of the hot springs is searching for the experience of an authentic natural and cultural identity. The user is experiencing the local identity through its contents: spa, sleep, food, walk, work, etc. The architecture is a tool, which offers this experience. The architecture is a FRAME for experiencing local natural and cultural identity.
