

PLUG&PLAY

BUSSINESS SPACE INTERIOR DESIGN

In the middle of the room there are four construction verticals “daisies”, which combine the entire interior program. The first vertical is designed for the reception (sitting area for guests and the office assistant), the second and the third are designed for the working units (six in total), while the fourth is designed as a meeting place. The conceptual design of the “daisies” provides growth and addition of the working units (plug & play) with additional equipment elements, which are plugged in to the supporting vertical. Individual elements can be spun around the vertical axis and thus provide a flexibility of usage.
