

PROPULSION 2

LOW ENERGY RENOVATION

ARHIOF 2017 AWARD-
SPECIAL MENTION

The geometry of the concept of the second facade skin: envelope is derived from the oblique facade of the existing extension. The design of the new facade results from the form of "mechanical sprocket" which is one of the products manufactured by the company. By combining these two basic principles of design, an effect is created on the facade blurring the line between 3D and 2D elements.
