

SPIRAL OF DEVELOPMENT 02

INDUSTRIAL BUILDING

Spirala razvoja 02 expands the Tajfun industrial complex, forming a spatial dialogue with Spirala razvoja 01 and defining the edge of the complex within the landscape.

The building follows a crystalline, fragmented form and is embedded into the slope, enabling a two-level production system that increases efficiency while minimizing footprint. Its geometry supports logistics from both sides. A continuous green envelope with glass light strips brings natural light deep into the interior, improving working conditions. Together with Spirala razvoja 01, it establishes a clear architectural identity where industry reflects the company's values and its relationship to the environment.
